

Methods – an NCSC Cyber Security Consultancy

methods 
AN ALTEN COMPANY

We provide approved advice to a diverse range of clients, helping them identify, assess, and manage security risks. With our proven experience and track record, we support organisations in achieving a risk-appropriate security posture.

Our focus is on assisting organisations in managing their cyber security risks effectively. We break down the task of protecting the organisation into critical areas and develop and implement relevant security measures as recommended by NCSC. By doing so, we help reduce the likelihood of cyber attacks and minimise the impact on your organisation.

Service Offering

We understand that Cyber Security, Data Protection, and Compliance challenges are different for every organisation in every industry. We leverage our expertise, vast industry experience, and pragmatic approaches to establish and embed compliance frameworks and practices which empower clients to focus on their core business activities.

With substantial experience spanning across Defence, Public, and Private Sectors, our team excels in supporting SME's and leading Global Enterprise Security Programmes. Our strengths lie in leadership, collaboration, and innovation, which form the foundation of our expertise. By delivering valuable insights and quality services, we establish a sense of trust and confidence with our clients, making us their dependable and trusted partner.

Methods is an NCSC Cyber Assured Service Provider

In 2021, Methods achieved the prestigious status of being a National Cyber Security Centre (NCSC) Cyber Assured Service Provider, a recognition held by fewer than 25 companies in the UK. Consequently, we are dedicated to expanding the cyber security workforce and actively collaborate with the UK Cyber Security Council (UKCSC) to establish new professional standards and long-term goals for specialised roles in the industry.

Our involvement with the UKCSC allows us to work closely with various UK Government departments and the NCSC to enhance public cyber security awareness and resilience for public good. We actively engage in developing standards and ethical practices by addressing current issues, shaping the standards for individual practitioners in the field. Together, we strive to ensure a safer and more secure digital landscape for the greater good.

Our objective is to ensure organisations are provided industry best practice strategies by offering the following:

Key Service Features

- Support and advice aligned to NCSC, NIST, and CPNI guidelines
- Providing Cyber Security services for specific or full organisational tasks
- A Cyber Security posture assessment and support with remediation requirements
